

# AR-KEY-LT

## 1-PORT MODBUS RTU/ASCII GATEWAY

AR-KEY-LT is a compact and reliable Modbus gateway that converts from Modbus TCP-IP protocol to Modbus RTU / ASCII and vice versa. It supports up to 8 TCP-IP Modbus clients simultaneously and 10 Modbus TCP-IP servers.

Through this model, serial Modbus slave devices can be integrated into an existing TCP-IP Modbus network as well as Modbus TCP-IP slave devices can be made accessible to serial master.

AR-KEY-LT can be configured through web server and software tools. The module has Vac / dc power on the same hardware, 1,5 kVac isolation, extended temperature range. The device can be powered also by a 230 Vac power supply unit.
